

NOVAtime Update: NT450 Release 4.82

Issue

NT450 Terminals
Latest Release V4.82

When

October 12, 2018

Issue Status

Update - OS

Next Update:

TBD

Update: October 12, 2018

NOVAtime is pleased to announce the release of the latest version of the NT450 firmware, version 4.82, scheduled to be released on 10/12/18. The v4.82 release includes the following enhancements and bug fixes:

1. We have enhanced the NT450 to resolve an issue with the NT450 sometimes failing to authenticate with the host database (NEWS error code 002-103 - No Database Found):
 - The clock will continue to try to authenticate with NEWS for eight hours. If, after eight hours, the error persists, the clock will then append a `_STOP` to the end of the client ID.
 - Following the `_STOP`, the clock will try to re-authenticate every 24 hours for up to seven days.
 - The network check thread was changed from three minutes to four minutes.
2. Failed employee and group table downloads will now resume from the failed batch instead of starting from the first batch to save time and data center resources.

Should you have any questions, please contact Hardware@NOVAtime.com.
