Product: **NOVAmobile**	Version: **3.16**	Date: **October 8, 2018**

NOVAtime is pleased to announce the release of the NOVAmobile version 3.16 update. They'll be submitted to Google Play and App Store on 10/8/18. The v3.16 release includes the enhancements and fixes detailed below. To access the latest version, please update the app on your mobile device.

ENHANCEMENTS

1. The Android version was updated to support the latest version of Android OS (9.0).

2. Both Android and iOS versions now can bring up an option to access the **Beacon Punch Page** when long pressing the NOVAmobile icon**.**

3. Employees can now press the "Beacon" button on the **Beacon Punch Page** to view their last beacon punch in the text field that displays "SCAN."

4. Beacon Admins can apply their beacon settings such as UUID, Major ID, Serial Number or Description using NOVAmobile after he or she customizes the beacon settings from NOVAtime 5000 SaaS **H/W Devices > Beacon** page instead of shipping them to NOVAtime for configuration.

5. The UI has changed for the following features: Registration, Login page, and Time-Off Approval function.

FIXED ISSUES

1. An issue with assigned employees to a system user, specifically for NOVAmobile, was fixed.

2. An issue where the web API was not downloading schedules if the "Do Not Show or Generate Shift Schedules" option was enabled under **Access > Advanced > Scheduler**, was fixed.

3. Several issues were resolved with the Employee/Supervisor dual login function:

    -   When the "**Allow missed punch entry from timesheet**" feature is enabled, supervisors will only be prompted to enter a missed punch if they are switching to themselves or logging in directly using their employee login.

    -   When the "**Allow missed punch entry from timesheet**" feature is enabled, the Manage Timesheet's "**Edit**" button will no longer be displayed after submitting a missed punch record. Also, the verbiage "Missing Punch" has been changed to "Missed Punch"

    -   The iOS version will no longer crash when tapping the calendar view.

4. An issue with "**Find My Employee**" (Outdoor) v3.15 for iOS was fixed. The app was not uploading location data at login (foreground mode) even if the "While Using" option was set in the App's Location permissions.

SURE PATH
NOVAtime Technology, Inc.

5. Fixed the "**Approve Time-Off**" feature to display pending time-off request records. The same issue was fixed for customers using the multi-level approval feature.

6. An issue was fixed so employees with schedule lockout now display correct in statuses after using the **Team Punch** feature to clock in.
