

NOVAtime System Update RELEASE NOTES

Product: **NT7000Lite**

Version: **1.8**

Date: **October 5, 2018**

NOVAtime is pleased to announce the release of the NT7000Lite version 1.8 update. The v1.8 release includes the enhancements and fixes detailed below. To access the latest version, please update the Operating System on the clock using the attached document.

ENHANCEMENTS

1. Added support for NT7000Lite automatic and manual OS updates.

FIXED ISSUES

1. We have enhanced the NT7000Lite to resolve an issue with the NT7000Lite sometimes failing to authenticate with the host database (NEWS error code 002-103 - No Database Found):
 - The clock will continue to try to authenticate with NEWS for eight hours. If, after eight hours, the error persists, the clock will then append a `_STOP` to the end of the client ID.
 - Following the `_STOP`, the clock will try to re-authenticate every 24 hours for up to seven days.
 - The network check thread was changed from three minutes to four minutes.
2. Failed employee and group table downloads will now resume from the failed batch instead of starting from the first batch to save time and data center resources.

Should you have any questions or need assistance, please contact Hardware@NOVAtime.com.
