

# NOVAtime System Update RELEASE NOTES

Product: **NT7000**

Version: **2.91**

Date: **October 5, 2018**

NOVAtime is pleased to announce the release of the NT7000 version 2.91 update. The v2.91 release includes the enhancements and fixed issues detailed below. To install the update, please follow the steps outlined in the **NOVAtime NT7000 Program Update Procedure** document.

## **ENHANCEMENTS**

1. The NT7000's performance was improved to support large employee databases. When "Disable employee download" and "Validate Employee" are both enabled, the nightly employee download process will not proceed. Whenever a new employee ID/badge ID is detected, the NT7000 will request that the new employee be downloaded to the time clock. Additionally, inactive employees are synchronized nightly to the NT7000 so that it can remove inactive employees accordingly.

## **FIXED ISSUES**

1. NT7000's single-clock meal lockout logic was adjusted to resolve an issue where an employee would be locked out of the time clock if they attempted to transfer immediately after an in-punch.
